Re: RNAV definitions – Phase 1 measures

The Independent Consultant, as a function of its role as peer reviewer of the work effort completed by the Project Consultant for the Boston Overflight Noise Study (BONS), has reviewed the FAA's definitions for the RNAV procedures requested as an outcome of Phase 1 of the study.

We concur that the descriptions, as provided in a memorandum from Terry English, Project Manager, to the membership of the FAA Evaluation Team Members, adequately replicate the over-land flight paths intended by the Phase 1 recommendations, as modeled for noise assessment purposes.

As there are no altitudes associated with the defined RNAV procedures, we look forward to reviewing their ability to replicate the intended altitude recommendations of the Phase 1 measures subsequent to their implementation.
